

collagen (*implant*)

When considering cosmetic surgery, it is important that you are fully informed on all aspects of the procedure that you are seeking.

Zyderm and Zyplast Collagen Implant

Time to reveal the inner you!

Line fillers are used to treat areas of fine lines, wrinkles, deeper folds or to plump up the lips or the border of the lips.

- Vermilion Border (Paris lip) - The upper edge of the lip
- Naso-labial Lines - Nose to mouth lines/folds
- Glabellar Lines - Frown Lines
- Marionette Lines - From the corners of the mouth down to the chin
- Peri-oral Lines - Around the mouth (smokers lines)

Collagen is safe non-surgical approach used to smooth out facial scars, lines and wrinkles and also used in improving the natural shape of the lips. But that's not all, there are so many areas that can benefit from Collagen such as frown lines or crow's feet and lipstick lines.

The procedure is completely different to using cosmetics or moisturisers, which only work on the surface. Collagen works from within your skin replacing your skin's natural collagen with injections to help fill out and smooth away lines and wrinkles. Simple and straightforward the whole procedure only takes about half an hour. A series of injections are administered around the problem area causing no pain, just a little discomfort. And the best thing about Collagen replacement is that the effects are visible straight away.

It is gradually absorbed by the body, in the same way as the natural protein, so you may need to top-up the treatment occasionally to keep wrinkles and lines at bay. The length of time the Collagen replacement will last for, varies from person to person, but most people find they only need a top-up about twice a year.

Collagen replacement requires a simple skin test to rule out any allergic reactions, so the chance of any adverse effects, such as redness or itching, are minimal.
